Fiber-Optic Construction in San Rafael

Contractors are installing the fiber-optic cable necessary to upgrade CDEC's electrical system. The work is necessary to improve electric service and reliability to our members. Also, this prepares San Rafael to receive fiber-optic internet service.

The following contractors may require access to your yard and electric easement on your property:

- Kelly Cable
- Ward Communications
- Transform Power
- R&R Construction

The physical appearance of your yard will be left in good condition, upon completion of our contractor's work.

Contractors will conduct their work between dawn and dusk, Mondays through Saturdays and carry CDEC-issued ID badges with the contractor's name and photo, along with a CDEC "Letter of Authority" that gives them access to power lines and equipment.

As a courtesy, CDEC and its contractors try to alert residents who live in areas where work occurs, even though notification is not required. The reason notification is not required is because residents – at the time they sign up for service – give the co-op permission to access their property in the event of repairs, maintenance or upgrades.

If you have any questions about the electrical upgrades or Red Bolt Broadband, please contact our Grants office at (505) 285-6656 or visit RedBoltBroadband.com
