

Continental Divide's Outage Management System is Now Live!

Make sure you're signed up on SmartHub to receive our outage alerts

We've officially launched our new Outage Management System (OMS) and can notify you by text message and email of outages affecting your service – but only if you have registered your account with our SmartHub app, and we have your current mobile number and email address.

With SmartHub, you can also report outages, make requests for street light repairs and connect with us on other account matters – all from the comfort of your smartphone or computer keypads!

Access SmartHub directly from our website or download the app to your phone or tablet from the Google and Apple sites. Not only will you receive text message of outages affecting your service, but you'll receive updates when crews are dispatched and when service is restored!
